

OfficeServ™ DS-5000 Keysets

The Perfect Digital Choice

Samsung DS-5000 Series keysets are the perfect choice for crystal clear communications in your small or medium company. We've all come a long way from the original black rotary instruments of the past, and this smart, full feature digital terminal family puts the power of Samsung's programmable features at your fingertips. From the cost efficient, easy to operate DS-5007S, to Samsung's DS-5014D/5021D models with their innovative Navigation Keys, Samsung complements your professional image while delivering the features and the adjuncts that help you work faster and smarter.

Designed to work with Samsung's OfficeServ™ 100/500 and OfficeServ™ 7000 series systems, your DS-5000 family of terminals helps you manage flexible, programmable functions for more efficient call processing. These ready to use keysets, with incoming and outgoing call logs, and other time saving call processing tools, make it easier for you to quickly maximize your productivity.

A plug-in module provides those special feature upgrades so important to your users, like the convenience of a full-duplex speakerphone on the DS-5021D and DS-5014D to permit both parties to speak more naturally and be heard at the same time. And, your station add-on module (AOM) with busy lamps will help your attendant process calls more efficiently while keeping close control of the flow.

Call your authorized Samsung dealer today to begin reaping the benefits of this safe investment that will grow with you now.

SAMSUNG
